PMO IN A BOX

Taking advantage of client's existing investments in SharePoint, Artis Group has created a suite of integrated functions which both mirror the work practices of the client and can embody all recognised Project Management Methodologies. The outcome uses the best features of SharePoint 2010 to create, define, manage and report on Projects, Programs and Portfolios.

Automating process and compliance activities, the integrated result allows the client to focus on the delivery of projects and programs, rather than struggling with the demands of the process. The result for the client is a growing maturity in areas such as Product Definition, Risk and Issue Management as well as building a reliable platform to securely extend functions and collaboration to internal groups, external partners and stakeholders.

Key Features include

- Capable of compliance with Prince2, MSP, PMBOK and client developed PM methodologies
- Can be deployed on all SharePoint versions, from Foundation through to SharePoint Online
- Deep integration with Office 2010, MS Project and Outlook, putting the business process into the best application for that person, at that time for that process step.
- Capable of iterative investment and deployment to meet client PMO maturity with just-in-time functional growth to suit process change
- Customisable templates and processes
- Alignment of project templates to the project lifecycle
- Extensive tools and techniques to assist in project success
- Governance and reporting structures to track project progress
- A suite of tools and techniques built on core SharePoint
- Features for user productivity to match client work practices
- Focused on collaboration with 'configured depth' into PMO practices and principles
- Flexible extensibility in scope and design to incorporate other business functions; such as, timesheet and time recording, client specific workflow and approval paths
